QUESTION 14

A database administrator created the outline for a database that describes its components and how they work. Which of the following did the database administrator create?

A. Record

B. Constraint

C. Field

D. Schema

Correct Answer: D

A database is an organized collection of information. The information is stored in a structured manner for easier access. Typically, a database consists of tables of information, organized into columns and rows. Each row represents a separate record in the database, while each column represents a single field within a record.

The structure of the database in terms of the fields defined in each table and the relations between primary and foreign

keys is referred to as the schema.

QUESTION 15
